

WATER TREATMENT SYSTEMS FOR HOTELS

By closely following the technologies of water and wastewater treatment systems in developed countries, VATEK Environmental Technologies provide turnkey contracting services in the fields of industrial, medical and public water treatment, project and consultancy, maintenance and technical service, consumables, equipment, spare parts and water chemicals internationally.

WATER TREATMENT SYSTEMS

Especially in hotel establishments, the water that will feed all the spaces should be descaled. With our **water softening systems**, the descaled water ensures the long-lasting use of building installations without deforming and prevents the appearance of white lime of sinks and shower faucets and extends the life of white goods. It also has other positive effects such as the longer life time of the washed textile products, the less amount of detergent use etc.

With our **gray water and rainwater treatment systems** which have become more frequent in hotels, the systems pay off in 1-2 years and reduction in total water use is achieved. Gray water treatment systems can be used for purposes such as garden irrigation by purifying all incoming water excluding of the toilet.

On the other hand, the chlorine and pH values of the pool can be kept at desired intervals with our fully automatic **dosing systems**.

As our water resources start to decrease, **sea water treatment systems** come to the forefront. This treatment technique is also important for enterprises with high water usage such as hotels.

We provide water treatment systems for hotels as follows;

- Filtration and softening systems
- Dosing and ultraviolet disinfection systems
- Reverse osmosis water treatment systems
- Wastewater treatment systems
- Rain water and gray water treatment systems
- Sea water treatment systems

FILTRATION AND SOFTENING SYSTEMS

Description

Filtration systems remove suspended solids, particles and remove organic pollution. It is used to provide the water with desired hardness degrees to be used in production.

DOSING AND ULTRAVIOLET DISINFECTION SYSTEMS

Description

Dosage systems are used for many purposes such as; water disinfection, pH reduction and raise, corrosion prevention and so on. Ultraviolet device are used to sterilize water. It is effective in removing micro organisms such as bacteria, viruses, fungi and mold in water.

REVERSE OSMOSIS WATER TREATMENT SYSTEM

Description

Dissolved organic and inorganic substances (salty, bitter, high conductivity, etc.), salts, heavy metals, viruses and bacteria in the water are treated with reverse osmosis systems. Up to 96-99% of purity in water could be achieved. Water with different sources such as well water, tap water, sea water etc. could be treated with high purity using Reverse Osmosis systems.

WASTEWATER TREATMENT SYSTEM

Description

It provides recovery and disposal of wastewater generated by domestic use in residential areas with unavailability of sewage system. At the same time, these systems are applied to meet the discharge criteria of wastewater from industry.

RAIN WATER AND GRAY WATER TREATMENT SYSTEM

Description	<p>Gray Water contains all waste water containing the least pollutants excluding the toilet water. Water obtained by Gray Water Recovery is used instead of mains water for works that do not require drinking water quality water.</p> <p>Rain water is the closest source to pure water. The water treated with rainwater treatment systems is used as domestic water.</p>
-------------	--

SEA WATER TREATMENT SYSTEMS

Description	<p>With the sea water treatment systems, the salinity of the water is removed and the water is brought to the fresh water criteria. Seawater treatment systems provide water for general use or drinking water. Designing a specific system considering the energy consumption with the best treatment efficiency is crucial in sea water treatment systems.</p>
